

# Corners—Outside 90° with Reinforcement

## MULTIPIECE SYSTEM INSTALLATION GUIDELINES

### FIRST COURSE WITH REINFORCEMENT

Begin by checking the wall plan to determine reinforcement lengths and elevations.

Lay a section of reinforcement near the corner of the wall, ensuring that it's placed within 1 inch of the face of the block and running along the back of the adjoining wall.

There is compacted backfill between grid layers.

### NEXT COURSE WITH REINFORCEMENT

Lay the next course of block, backfill and compact. When installing the next section of reinforcement, place within 1 inch of the face of the block and running along the back of the adjacent wall.
