Step 1: Place reinforcement so little or no overlap occurs in the radius area. If overlap occurs, place 2 to 3 inches of sand between the reinforcement layers.

2"-3" of soil fill required between overlapped reinforcement for proper soil and reinforcement interaction.

Minimum radius 4 ft. to face.

Step 2: Lay the next course of block. Make a mark on the back of the blocks in the areas that are not reinforced. Backfill and compact that course.

Step 3: Place reinforcement in the areas where the marks show gaps in the lower reinforcement pattern. Continue normal wall construction, repeating these steps as needed.
