Structural design elements must be used if a freestanding wall is more than 10 feet long. Structural design elements include:
- 7-foot radius for 11 feet
- freestanding wall jog
- 90° corner
- pedestal

**FREESTANDING WALL JOG**
Jogs are used to break up straight lines and add stability to walls. Split* units as needed. Use hammer and chisel to round split faces. Glue all courses of jog with a concrete adhesive.

*To split a block, use a hydraulic splitter or split manually by using a hammer and chisel to score the block on all sides. Pound the chisel on the same line until the block splits. If partial unit sides are not exposed, use a circular cut-off saw with a masonry blade to achieve a tighter fit.
